This report is a general appraisal of the overall Metropolitan Hamilton Population. It is intended as a guide for more detailed studies of individual municipalities or areas.

This report is not intended specifically as an indicator for private investment decisions or market analysis, but rather as a guide for a development program necessary to provide land, utilities and services for the accommodation of an expanding population.

1. Study Area

The study area as shown on Plate #11 includes the municipalities listed below, which are also grouped into sectors for study purposes.

<u>Sector</u>	<u>Municipality</u>	<u>Planning Area</u>
Burlington	Town of Burlington	Burlington and Suburban
West	Village of Waterdown	Hamilton-Wentworth
West	Township of East Flamboro	Hamilton-Wentworth
West	Township of Beverly	Hamilton-Wentworth
West	Township of West Flamboro	Hamilton-Wentworth
South-West	Town of Dundas	Hamilton-Wentworth
South-West	Township of Ancaster	Hamilton-Wentworth
South-East	Township of Binbrook	Hamilton-Wentworth
South-East	Township of Glanford	Hamilton-Wentworth
East	Town of Stoney Creek	Hamilton-Wentworth
East	Township of Saltfleet	Hamilton-Wentworth
	City of Hamilton	City

2. Record of Population Growth

The growth for each municipality is given in Tables A, C, D, and E. Totals for the metro area and its sectors are found in Table G. Figures were obtained from the Dominion Bureau of Statistics and the Annual Reports of the Ontario Department of Municipal Affairs. Earlier reports include a distribution of population over five major divisions of the city for the historical record of growth before the base year. This data is presented in the same tabular form herein.

3. Distribution of Recent Growth

Spatial distribution is an essential feature of the population growth projections, particularly when separate local government units are involved. The distribution of the present population by major divisions of the metro area is shown on Plate #11. The City of Hamilton has been divided into ten planning districts for forecasts, rather than the five major districts as used in previous studies. These districts are shown on Plates 2 and 3.

Recent trends in growth distribution are noteworthy. Plate 14 shows growth in each sector from 1961 to the study base year, 1966. Plate 1 shows distribution of growth between the Mountain and the Lower Hamilton area. All areas show significant increases except for Hamilton-Lower, where absorption of residential areas by industry and civic uses offset density increases of other parts of the lower city. A negligible overall population growth results.

4. Future Growth

Population forecasts made as a part of this study are supplemented by a number of other forecasts based on comparisons of Metro-Hamilton with larger areas; Canada, Ontario, the sixteen other largest Canadian Metro areas, and the Metro Toronto and Regional Transportation Study. (MTARTS)

Unestimable variables make it impossible to predict into the distant future with confidence. The inclusion of comparisons covering very large areas, which have inherent stability, lends reliability to forecasts. We have accepted a locus curve drawn through the mean of these estimates.

5. Future Distribution

Population forecasts made from comparisons with larger areas are difficult to distribute within the Metro Area. In addition to this traditional method of forecasting, a study in depth was made of anticipated future land utilization and density for individual municipalities and city districts. For this purpose, the City was divided into ten logical planning districts conforming to neighbourhood and community boundaries.

Elongated census tracts on the mountain do not conform to logical planning districts. In these areas, district base year populations were estimated by reviewing existing land use, then subtracting population housed in new residential units constructed from the base year to the present.

Populations compared favourably to the Assessor's ward totals. Additional data and projections, as those recently made available by the MTARTS and Hamilton Area Transportation Plan are incorporated wherever possible.

These independent forecasts, when added, form a projection curve for the entire Metro Area which indicates a slightly faster growth than the median of comparisons with larger areas. The greater slope of this curve is due to assumptions as to the dates at which certain population levels will be reached. These assumptions were made after obtaining the best possible information on the availability of serviced land at certain dates.

The expected construction staging for services, sale of land controlled by the Ontario Housing Corporation, and anticipated urban renewal projects are all reflected in the projection of this report, as are the forecasts of various municipal agencies and the Hamilton-Wentworth Planning Area Board.

It is impossible to anticipate to an accurate degree all of the influences on long-term projections, therefore predictions as to the phasing of development in certain districts incorporate the opinions and judgements of knowledgeable persons.

The market for housing is dependent upon many factors that are difficult to predict, such as availability of mortgage and construction money. Distribution and dates for ultimate development are therefore rough estimates and the five year increments are more reliable than the long-term forecasts.

Further, the development program to provide land, utilities and services is more important than the exact numbers of people. If yearly appraisals show that projections require updating, the development program can be adjusted to ensure that growth and the five year program will coincide.

The most spectacular growths are predicted for Burlington and the Mountain Districts of Hamilton. The other suburban communities will experience a high rate of growth with Saltfleet, Ancaster and Dundas perhaps having a significant impact upon the total metropolitan area.

It is realized that growth of a particular area will not depend solely upon the development demand, but also upon the desire and capability of each municipality to satisfy demand or attract new development. This entails policy decisions by the various levels of government as to capital improvement programs and subdivision approvals.

Population projections for communities excluding Hamilton are shown by graphs on Plates 5 through 10. These graphs are made from Hamilton-Wentworth Planning Area Board projections, updated where accurate information was available.

On each graph, an additional forecast is shown, based upon the change from 1961 to 1966 and extended to 1986, compounded annually from 1966. This serves as a comparison with the forecasts based upon judgements as to future land use.

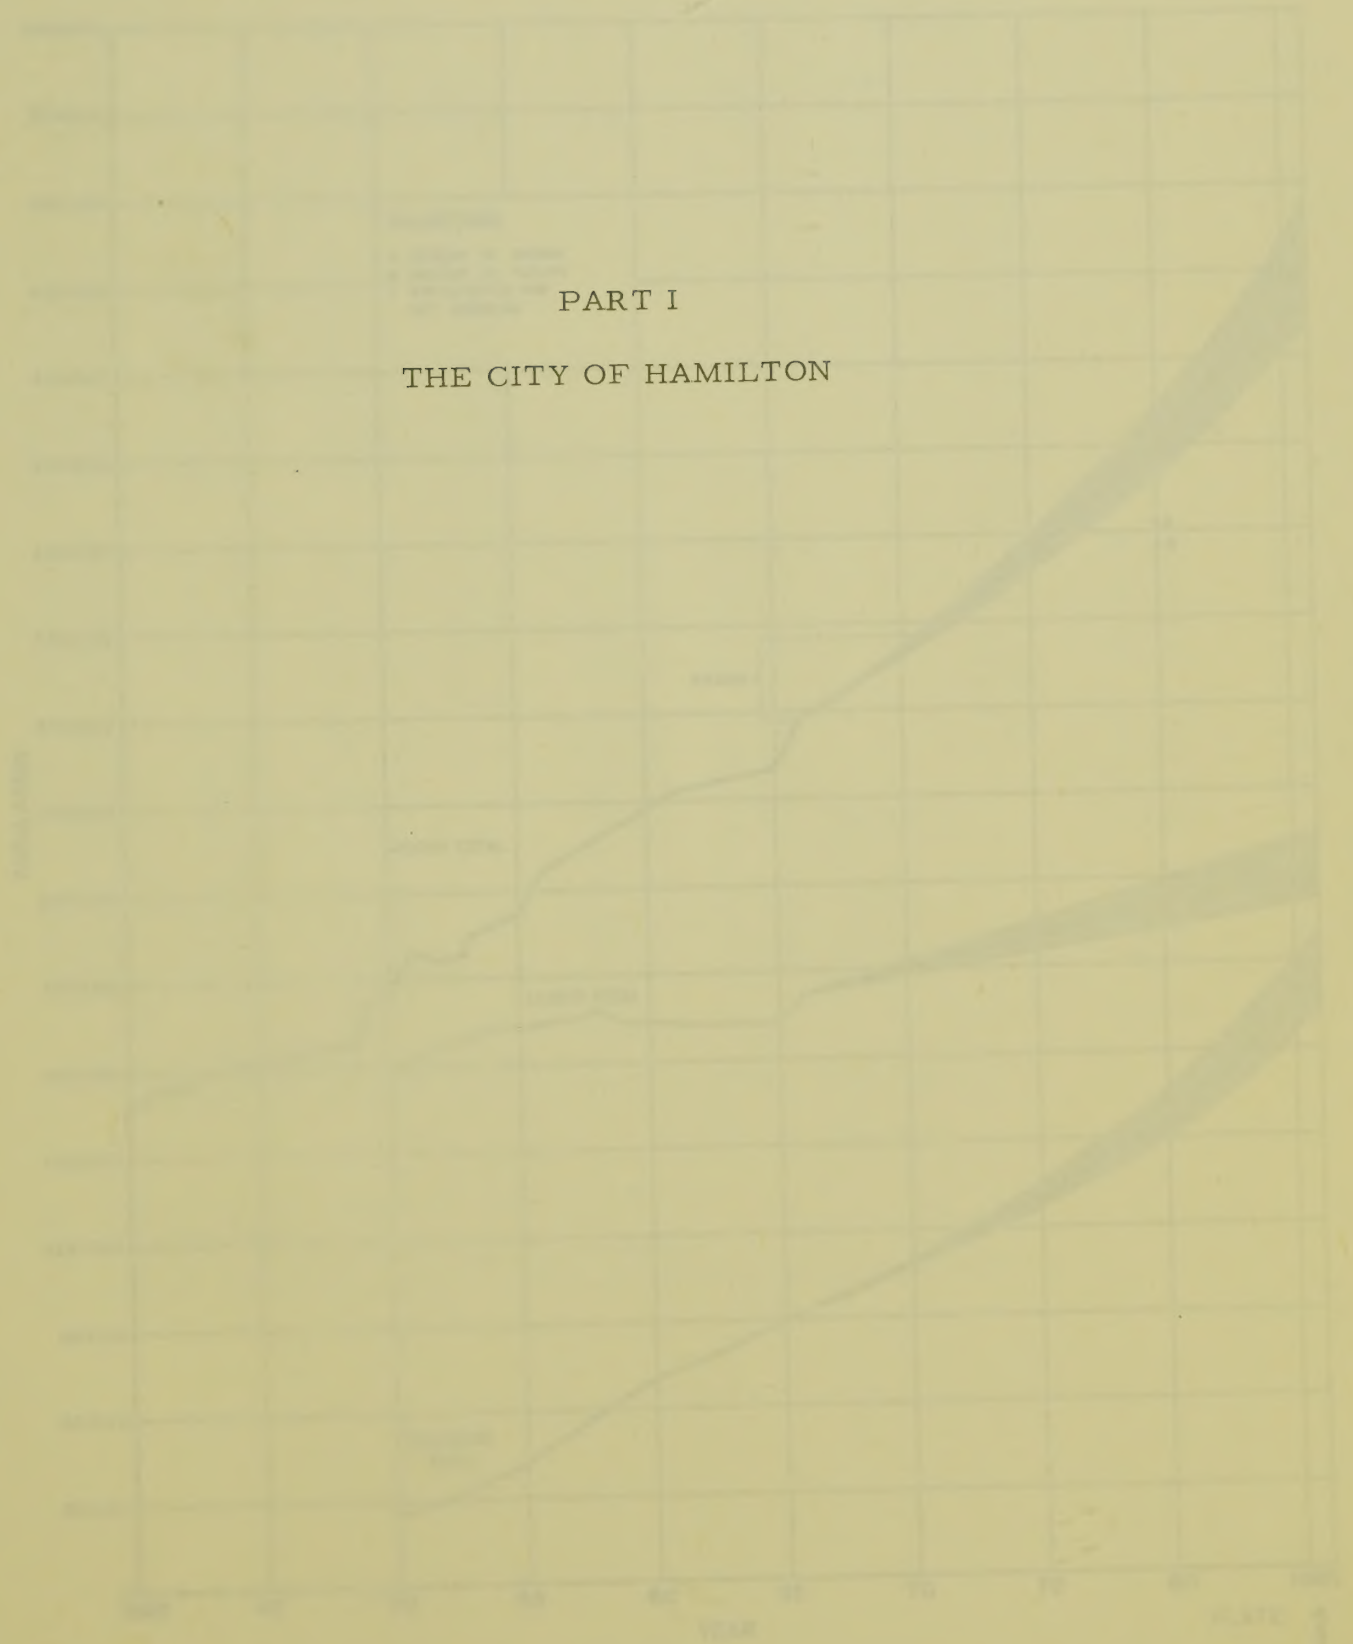

In the case of Dundas and Ancaster, it was felt by the City Planning Department researchers that the Hamilton-Wentworth Planning Area Board projections may be unrealistically high and should be closer to projections made in earlier reports.

For Dundas and Ancaster, the data graphed is computed on the compound interest method, projecting the 1961-1966 growth. The Hamilton-Wentworth Planning Area Board projections are shown also, but the former projection is used in totals for the Metro Area.

Table I.

PART IV

COMPARISONS WITH LARGER AREAS
and
NATURAL INCREASES

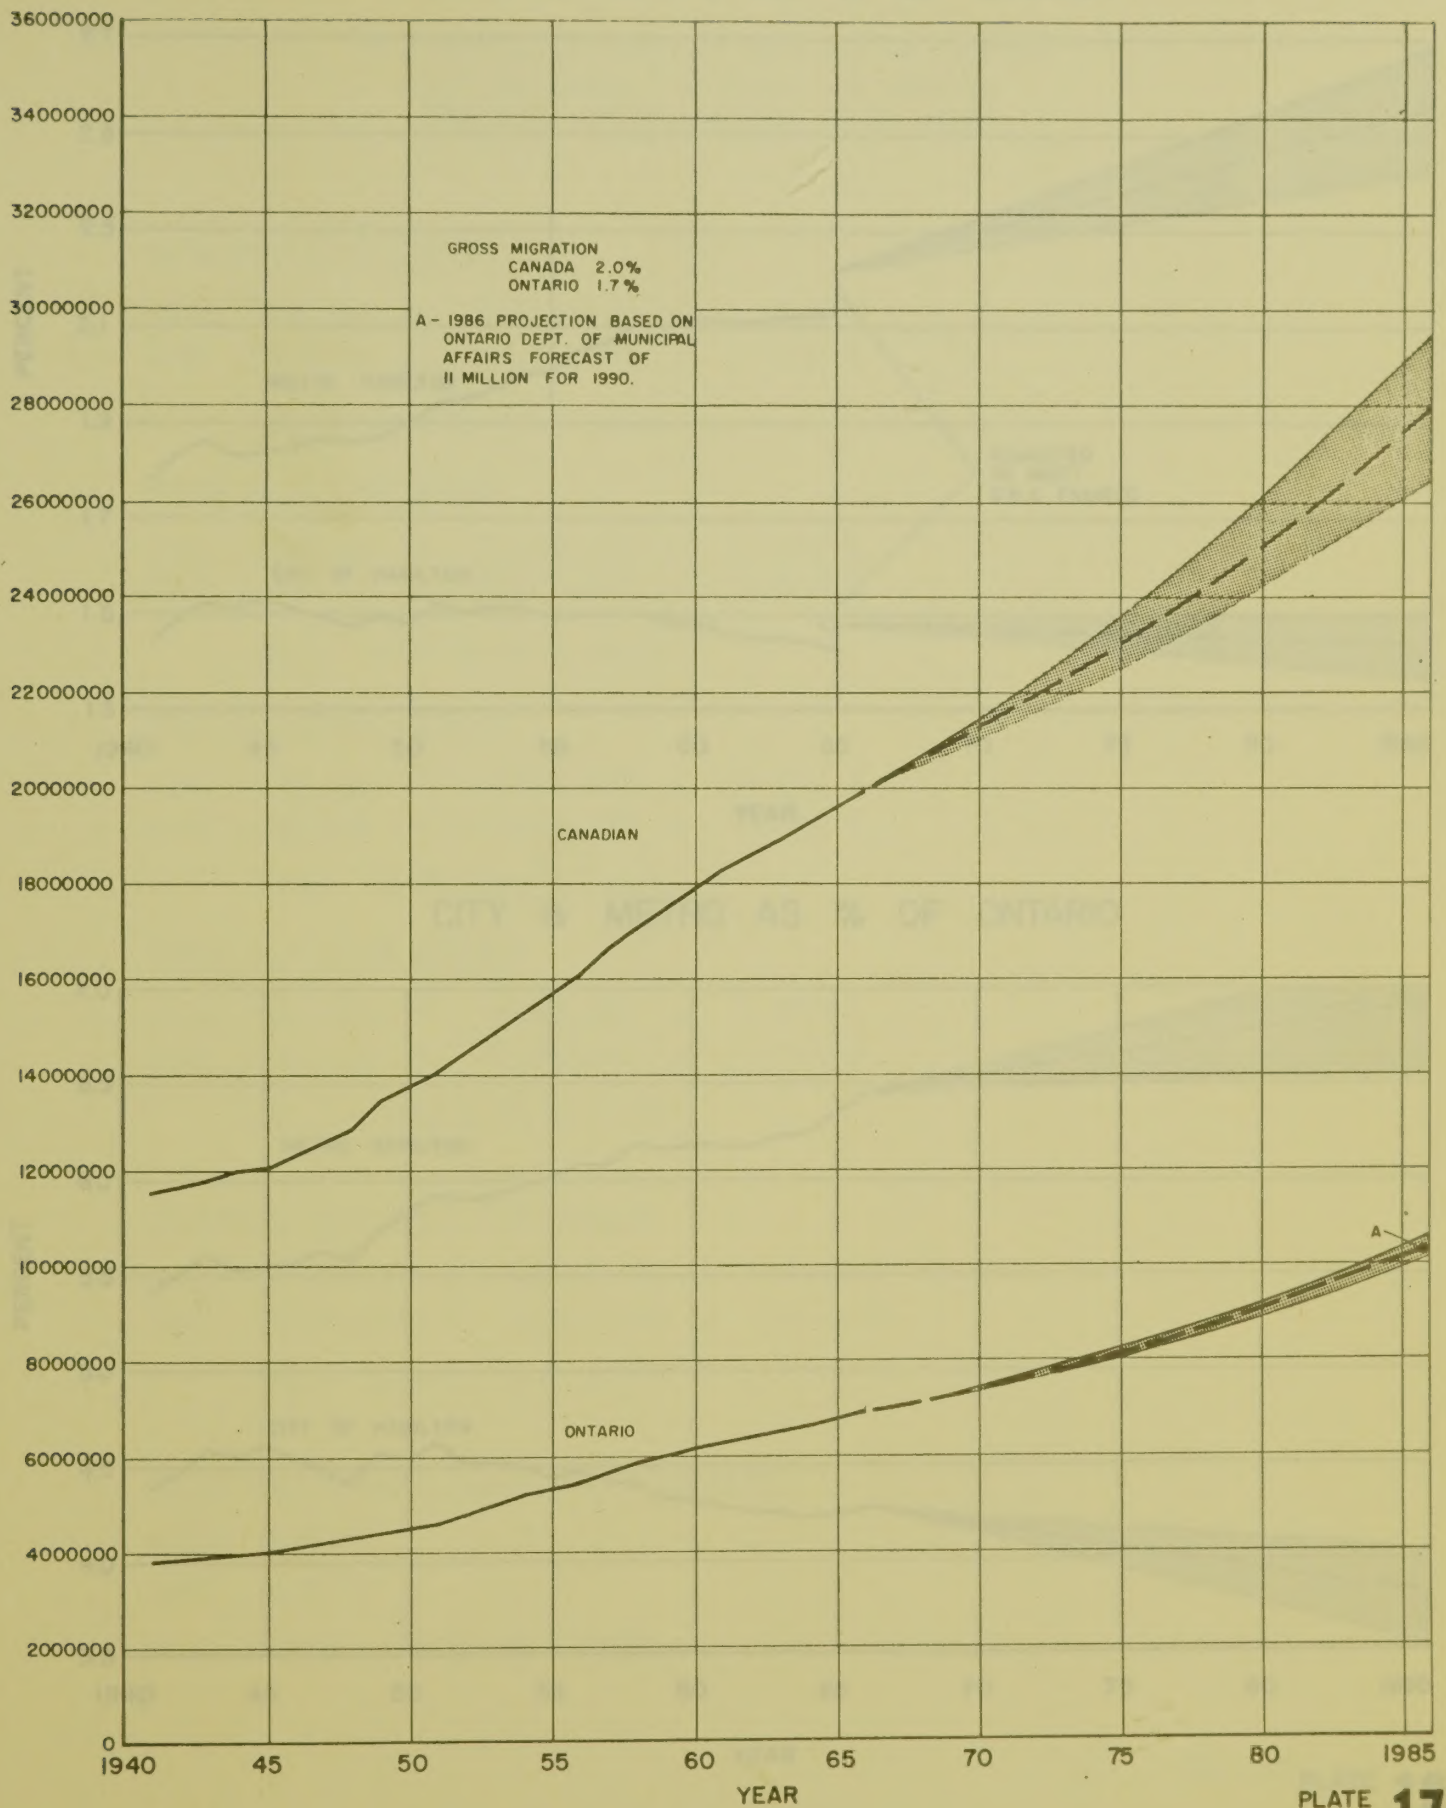

Projections utilizing a method of comparison to larger, more stable areas provide a reliable forecast.

City and Metro Hamilton vs. Canada and Ontario
Metro Hamilton vs. other Canadian Metro Areas.

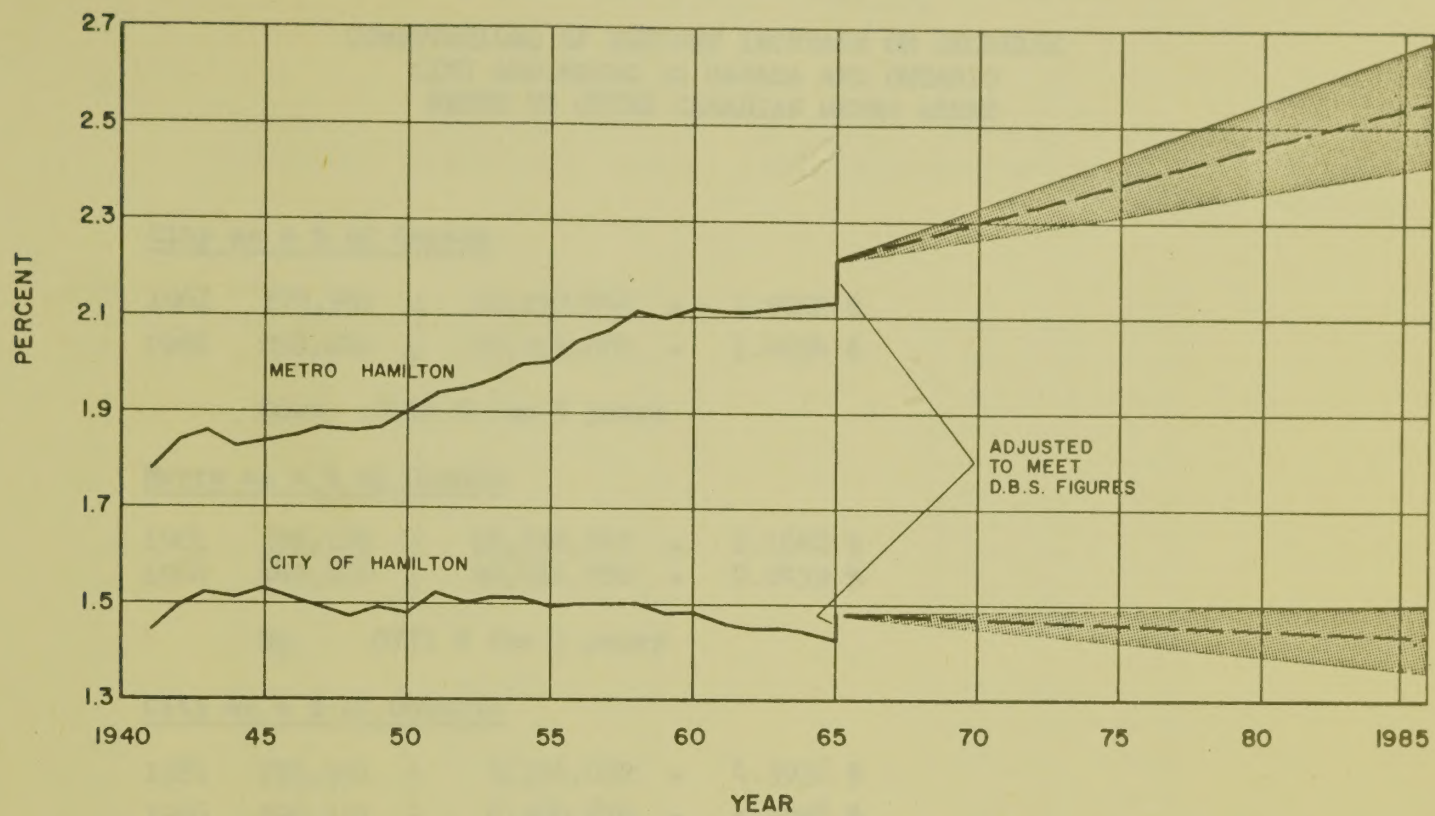

Population projections for Canada and Ontario have been updated according to the Economic Council of Canada forecast made in 1968. These are shown on Plate 17. Straight line extensions have been made of the 1961-66 percentage increase or decrease of the City and Metro as a part of Canada, as shown on Plate 18, and as a part of the 17 largest Metro areas, as shown on Plate 19.

Computations are given in Table J.

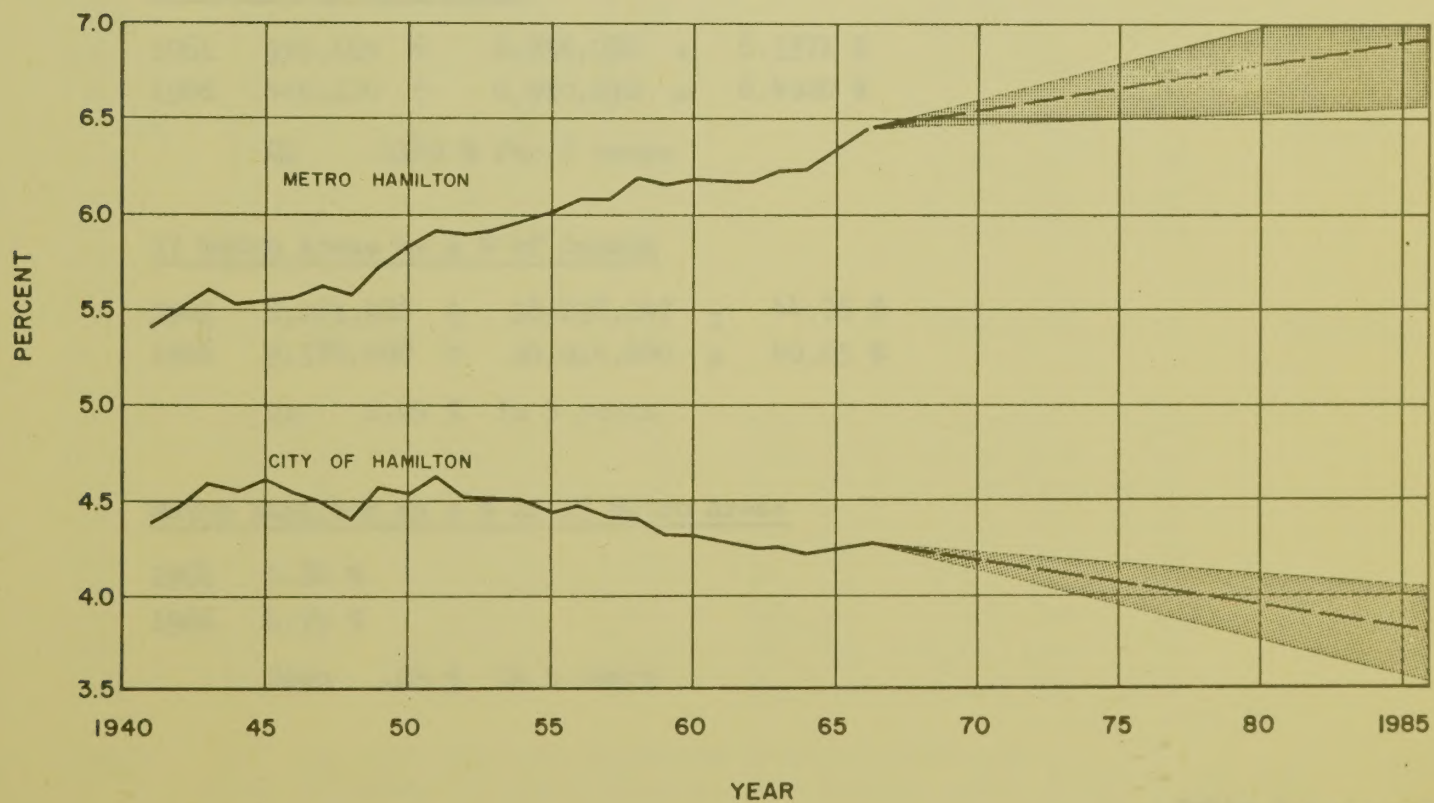

POPULATION OF CANADA & ONTARIO

CITY & METRO AS % OF CANADA

CITY & METRO AS % OF ONTARIO

COMPUTATIONS OF PERCENT INCREASE OR DECREASE
CITY AND METRO VS CANADA AND ONTARIO
METRO VS OTHER CANADIAN METRO AREAS

City as a % of Canada

1961	273,991	÷	18,238,247	=	1.5022 %
1966	298,121	÷	20,014,880	=	1.4894 %

Down .0128 % for 5 years

Metro as a % of Canada

1961	395,189	÷	18,238,247	=	2.1668 %
1966	449,116	÷	20,014,880	=	2.2439 %

Up .0771 % for 5 years

City as a % of Ontario

1961	273,991	÷	6,236,092	=	4.3936 %
1966	298,121	÷	6,960,870	=	4.2828 %

Down .1108 % for 5 years

Metro as a % of Ontario

1961	395,189	÷	6,236,092	=	6.3371 %
1966	449,116	÷	6,960,870	=	6.4520 %

Up .1149 % for 5 years

17 Metro Areas as a % of Canada

1961	8,163,986	÷	18,238,247	=	44.76 %
1966	9,376,288	÷	20,014,880	=	46.85 %

Up 2.09 % in 5 years

Metro Hamilton as a % of 17 Metro Areas

1961	4.84 %
1966	4.79 %

Down .05 % in 5 years
